82ZT132 Zero Turn Ride-on Mower

The 82-Volt Zero Turn mower is designed for professional landscapers and owners of large properties. The mower features an 132 cm fabricated steel mowing deck and a 16-kilowatt hour battery. It runs all day, mowing up to 4 hectares per charge. Other features include commercial-style foot pedal deck lift for easy cutting adjustment and electric take-off (ETOTM) which enables operators to use powered and non-powered accessories. All switches, displays and brushless motors are IPX4 waterproof. The 82V battery-driven ride-on mower is a true environmentally friendly alternative to petrol driven products.

Remote After Sales Service

In the unlikely event of any issues, our aftersales team or your dealer can remotely access your Cramer Zero Turn to instantly see any issues and remotely troubleshoot, to minimize downtime.

Ergonomic

Control the wheels using two sensitive driver sticks that respond to small movements, allowing very easy turning and steering. Turning with the Cramer Zero Turn is much more ergonomic and driver-friendly compared to an ordinary mower with or without Servo steering.

Excellent visibility

The Zero Turn mower has nothing to impair your view, making it easy to avoid stones and any other obstacles to perfect mowing.

Greater manoeuvrability

A smart driver system makes transitioning from forward to reverse really fast compared to other mowers. It's the perfect mower for ornate gardens with lots of trees, plants and other obstacles.

Ekskl. mva

The Zero Turn is able to turn on its own footprint meaning that it doesn't leave a patch of unmowed grass behind. This makes mowing large grass areas a lot faster. There is no need to reverse.

Thanks to the high maneuverability it's very easy to go around trees, flowers, and bushes without leaving uncut grass behind

The construction of the Zero Turn mower allows a great visibility of what will be cut next, which is very beneficial when mowing a yard or park with lots of obstacles

The cutting deck of 132 cm is wider than the cutting decks of most common lawn tractors which is extremely helpful for parks, big property management, sport parks etc.
